

UNDERSTANDING OILY WATER

WHAT DOES OILY WATER REALLY LOOK LIKE?

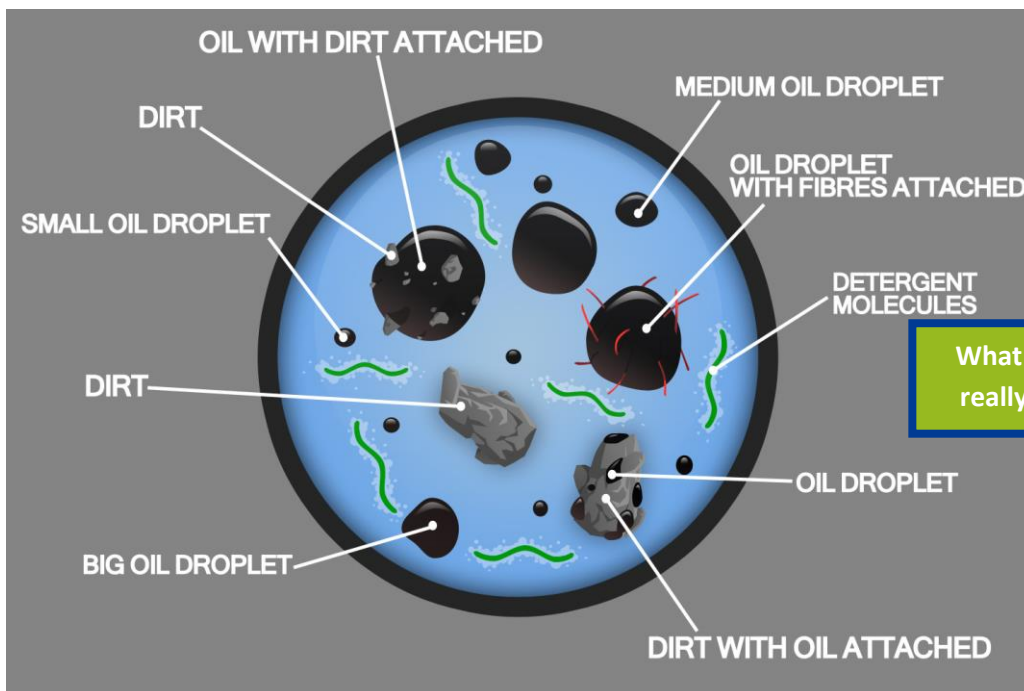

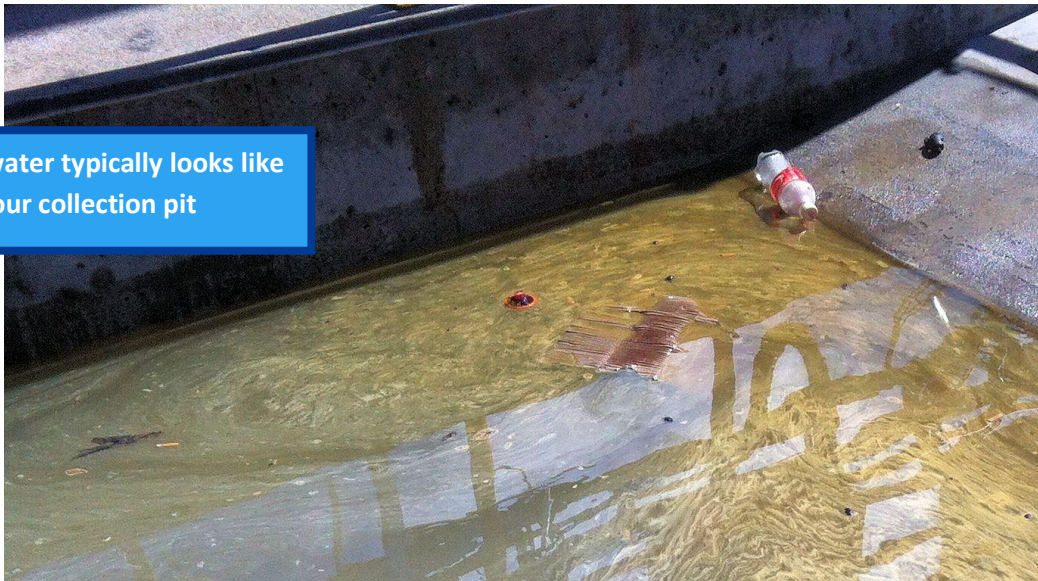

Before selecting an oily water separator it is important to understand what your oily water really looks like.

Real world mixtures of oil and water are contaminated with a mix of:

- Free Oil
- Emulsified Oil
- Dissolved oil and other dissolved contaminants
- Solids and sludge
- Trash and debris

Understanding what all the contaminants are will help you select an oily water separator capable of dealing with all of them!
